DESCRIPTION
Thermal Touch heat sensitive paint is a water-based wall Emulsion that is easy to apply using a roller or a paintbrush.

Tip: For the very best effect we would recommend spraying it on.

When the product is applied, it goes on one colour then at the touch of a warm hand the second colour is revealed. Once the coating has cooled down it will revert back to the original colour.

The standard activation temperature is 22°C, however on request other activation temperatures can be manufactured (a minimum order of 5 litres applies to custom orders).

POINTS TO CONSIDER BEFORE USING THIS PRODUCT
1. Some wall substrates/surfaces are naturally cooler than others so will take longer for the product to activate.
2. Some substrates, for example wood, hold heat more than others, so a handprint may remain longer than on a naturally cooler surface.
3. This product is not designed for outdoor use. Keep out of direct sunlight and large changes in temperature. Direct sunlight will shorten the life of the product.
4. It is worth monitoring the temperature of the area to be painted, areas near radiators or particularly hot rooms may activate the paint constantly.

STORAGE
Store paint in dry conditions and protect from extreme temperatures. Keep away from frost.

COLOUR AVAILABILITY
Black/Pink
Orange/yellow
Other colours are available upon request

PREPARATION
To get the best results with the Thermal Touch, prepare the surface by removing any loose or flaking material. Make sure the surface is clean (no dirt or grease) and dry (new surfaces particularly must be fully dry).
BASE COLOURS
For best results apply a base colour that best matches the activated colour. For example, for the orange to yellow paint, it is best applied over a yellow base colour. It can be applied over white but you will need more coats to get the coverage required.

MIXING
To ensure you get the best results mix the product thoroughly before use.

APPLICATION
For the very best results, apply 2 coats of this product with a spray gun. You can thin the product 10-15% for spray gun use.
Alternatively, apply two coats with a good quality brush or roller; leave 2-3 hours between coats. Do not apply in very damp or humid conditions or extreme temperatures.

Tip: Apply in temperatures well below the activation temperature. This will ensure you get an even coverage.

CLEANING
Remove paint from the brush or roller with a cloth and then wash with water.

HEALTH & SAFETY

IMPORTANT:
Please read all Material Safety Data Sheets for all products before use.
